REASONS FOR ALLOWANCE

1. The following is an examiner's statement of reasons for allowance:

Claims 1-13 filed on 8/4/2006 have been considered in view of the specification and the drawings of this application with respect to the references of the record. Claims 1 and 5 recite an auto-close/blocking selector switch which, if enabled in a blocking mode, precludes the operator from receiving operational signals from any source other than the wall station. The patent to Clark et al (4,808,995) has been considered. Clark et al disclose that the transmitter contains two buttons, one to produce normal door operation and the other to set the operator into a "secure" mode wherein it will be non-responsive to further valid operating codes until reset. See the abstract. Clark et al further disclose at column 2 lines 24-32 that:

In general this is accomplished by providing a "vacation switch" which may be selectively actuated by the owner to effectively disconnect the operator controller from its power supply and, as a lesser level of security, a device, preferably actuated through the radio remote transmitter, for disabling the operator so that it no longer responds to a proper radio transmitted code, but which can be reset for normal operation without the need to gain access to the secured area.

Clark et al disclose a device preferably actuated through the radio remote transmitter for disabling the operator so that it no longer responds to a proper radio transmitted code. Whereas, claims 1 and 5 recite the wall station having "an auto-close/blocking selector switch" for selecting the auto-close and blocking functions. Patentable distinction has been considered whether Clark et al's remote "device" constitutes the wall station "auto-

close/blocking selector switch" function, or Clark et al's remote "device" constitutes the blocking function as recited in the claims. Patentable distinct is made that the purpose of the wall station auto-close/blocking switch precludes the operator from receiving operational signals from any source other than the wall station. Since Clark et al's device is a portable radio transmitting device, it is excluded from the "receiving operational signals from any source other than the wall station" as recited in the claims. Furthermore, Clark et al fail to teach or suggest the auto-close feature incorporated with the wall station as recited in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
